Datamate	$3.00
5 Data Packs	$1.50
1000 address labels	$2.00
all other continuous forms	$1.00

Programs shipped free to Canada.

INTRODUCING AUTOAID

AutoAid is an enhancement to SmartBasic and gets loaded into the LOMEM memory area in Basic.
The HELLO installation program takes care of the installation into LOMEM for you. Once
installed, AutoAid sits in memory as a faithful servant between you and SmartBasic.

AUTO LINE NUMBERING

AutoAid can type in line numbers for you. Just press the UNDO function key and AutoAid will
automatically generate a new Basic line number for you. Want to jump up to line number 900
and create a new subroutine? No problem. An easy to use AutoAid command allows you to set
the UNDO starting line number. You can also change the line number increment (2, 5, 10, etc).

FUNCTION KEY DEFINITIONS

AutoAid lets you define the function keys to be equal to any string of characters. For
example, you can make the GET key be equal to the string "LOAD " and the STORE key to be equal
to the string "SAVE ". Press the GET function key and AutoAid types in the command "LOAD " for
you. With AutoAid you can redefine any function key to be any string of characters (including
cursor movements).

What's more, you can change function key definitions on the fly, at any time. For example,
say you're writing a program and you need to type in the string "IF variable = " on many
different lines. No problem. Define Smartkey I to be "IF variable = ". Now any time you
need to type in that string, just press Smartkey I and AutoAid will type it in for you!

EXTRA TOUCHES

AutoAid includes the ability to turn on or off keyclicking. It also includes a caps lock
feature. When enabled, the caps lock feature capitalizes only the letters a-z (not all keys
as the shift lock button does).

BUILT IN PRINT BUFFER

How often have you sat there waiting for the Adam printer to finish so you can get back to
working on your Basic program? AutoAid to the rescue! AutoAid includes a built-in print
buffer. Your printer output goes directly to the printer buffer in ram. Control is returned
to you while the printer is still printing from the ram buffer. If you have the 64K ram
expansion card, you can use part or all of it as the print buffer. You could be printing
65,000 characters of printout while you're busy writing programs!! AutoAid skips over the
perforations on continuous form paper, indents your printouts, and allows you to print form
feeds.

Built into AutoAids is a set of callable assembly language routines: sound output, alter text
and background colors, character display in GR and HGR modes, a higher density low resolution
graphics mode, direct read and write to the video display chip and the 64K expansion memory.
Complete graphics sprite control and much more!

DATAMATE Data Storage Kit

TEN ADAM data packs, cassette box labels, and a FREE cassette storage case (holds 15 data
packs). Price includes FREE shipping within the U.S. Two types of tapes are available.
1) Loran tapes. THE HIGHEST QUALITY DATA TAPES AVAILABLE FOR THE ADAM. Loran tapes are
   specially designed for high speed operation and have an anti-static design to prevent
   accidental erasure of your data. (The high speed of the Adam tape drives causes a static
   electricity build up. Cheaper tapes will discharge onto the read-write heads causing
   destruction of your programs and data!!).
2) Generic brand.

INTRODUCING VIDEOTUNES

VideoTunes is a music program designed specifically for your Adam computer. With it, you can compose, play, and save music.

VideoTunes displays a four octave note range and plays up to three notes at a time. The VideoTunes screen displays both the treble and bass musical staffs. Four octaves of piano keys appear at the bottom of the screen. There is one piano key for each of the notes in the four octave note range. The piano keys are identified by letters.

COMES COMPLETE

VideoTunes comes with eleven prerecorded demonstration songs. You can play them immediately without having to learn how to use VideoTunes many features. Your VideoTunes program comes with a complete instruction booklet. VideoTunes is very easy to use.

WHAT CAN YOU DO WITH VIDEOTUNES?

You can perform numerous functions with VideoTunes by using the keypad and/or joystick control.

For example, you can:
. add notes to either staff
. delete notes from either staff
. change the note measure
. sharp or flat notes throughout a score of music
. use sharp, flat, or natural notes
. use rests
. scroll the music right, left, or to the beginning or ending of the music
. change the music tempo
. use musical keys
. play the music you've created
. save the music on tape or on disk to play it later
. add commments to the music (name of the author etc)

THE MUSIC LIGHTS UP!

When VideoTunes plays a song, the notes on the screen light up in red as they are played (both the notes on the musical staffs and the notes on the piano keyboard). The music scrolls across the screen as the music is played. Each song you create can store one thousand notes.

A PERFECT 10

Joe Blenkle (see the Jan/Feb issue of ECN) rated VideoTunes a perfect 10 out of 10!!
Order your copy today and find out why. Whether you're learning music or you just want to have some fun, VideoTunes is for you.
