The programs outlined on the following
pages have been developed as an aid in
understanding ADAMS' SMARTBasic.

They will show you how to use:
      a.) subroutines
      b.) low resolution commands
      c.) high resolution commands
      d.) graphic equations
      e.) shape tables
      f.) data statements
      g.) arrays
      h.) random number generators
      i.) music producing logic
      j.) and other SMARTBasic commands
          such as PDL and LEN

We do not reserve any copy rights, the
programs are yours to modify at will.

	PROGRAM	PRICE	FUNCTION/INFORMATION
1.	MATH	$ 5.00	Uses basic screen displays and prompts you to input any two numbers for addition, subtraction, multiplication, or division. You keep trying until you get it right.
2.	RNDMATH	$10.00	Randomly generates two numbers for you to add, subtract, multiply or divide. The significant digits (tens, hundreds, thousands, etc.) you select when you order. Here we also align and stack the numbers and give you the correct answer after five incorrect tries.
3.	VARMATH	$12.00	Same as rndmath only here you may have two different significant digits depending on the operators names. You specify name and digits when ordering. 　　　Ralph - hundreds for add and subtract 　　　　　　- tens for multiply and divide 　　Connie- thousands for all functions
4.	TICTACTOE	$15.00	Conventional tictactoe game. Has scores for you, ADAM and the tie games. Uses two nine dimensioned tables and random numbers.
5.	SKIGAME	$ 8.00	A modified version of SKI as was in the February '84 issue of "Family Computing" magazine. You will use the PDL command to move your skier down the hill.
6.	PUMQUES	$10.00	A modified version of PUMPKIN from the October '83 issue of "Family Computing". There are some questions about Holloween before the pumpkin appears. He will wink at you. Great to get children interested.
7.	PAINTER	$ 5.00	Paints the screen different colors. Each time, the color size gets smaller and overlays the previous color. Great for the little ones just learning the colors. Uses low res graphics. Terminates with an interresting optical illusion.
8.	GRAPHICS	$15.00	Presents you with the ADAM$_{tm}$ logo which will change colors. Then it will show you graphic usages in both high and low resolution.

9. HOUSE $15.00   Will draw two houses, a garage, a car and a
                            street scene. It uses five shape tables and
                            high resolution graphics.

10. MUSIC $15.00   Plays a song demonstrating ADAM's music
                            ability. Displays the words and notes of
                            "Good King Wenceslas" while playing the
                            song. Will include documentation giving
                            the sound frequencies needed to create music.

If you have a special request, please give as many details as possible
and we will see if we can help.
