SALE- 𝔑 LOOK

LIMITED SPECIAL OFFER

FOR A LIMITED TIME ONLY (through Mar. 31, 1985) we are offering our new NIK GRAPHICS EXPERIMENTER (with newly added features) at a special introductory price to demonstrate the capability of our programs. OUR BEST SELLER at $39 you may have for only $29 plus $1.50 p&h. Our new features allow you to call up Rabbit Graphics from within the Artists Keyboard (any size, anywhere on the screen). In addition, the number keys 1-10 all call up their own graphics (flashing beacon, multicolored pyramid, building blocks, etc.

This special offer will be on an ADAM or ADAM compatible datapack (depending on availability). Good only through the month of March, 1985.

We would also like to introduce THE BUSINESS GRAPHS PACKAGE with its new STAT PACK. Along with its 6 graph styles, built-in DATAFILER, and print dump graph is a new statistics package that instantly gives you three screens of statistics on your data and, of course, an auto print dump of the data to ADAM's printer.

Hi·Res

THE GRAPHICS EXPERIMENTER CONTAINS:

I "3D" SWEEPART: With five sample programs-flowerplot, nuclear sweep, spectacular multicolor displays. This is an exceptional program that draws in, around and behind itself in "3D" as you watch! We have never seen anything like it for any computer, not even the elaborate "point plot" "3D" art used to demonstrate expensive computers. With this you see the "3D" effect while it is drawing.

II EXPERIMENTAL "3D" SWEEPART: Allows you to input your own variables to create new, original sweepart in great variety.

III ARTMOTION GRAPHICS: Creates shapes, patterns, or characatures from EVERY key. Press any key and moving shapes create characatures, symmetrical patterns and colorful displays as they move around the screen. Draws may continue for several minutes or may be halted at any point so you can switch to the ARTIST'S PAD and finish out your own picture with the paddle control.

IV EXPERIMENTAL COMPUTER GENERATED ART: An experimental version of the above allows you to input over 100 variations on the art motif and 100+ different shape art styles. The combination of the two makes an almost infinite number of variations possible (about 20% will be repeats but the variety is enormous). These can also be adapted as background screens for your own art.

V RABBIT GRAPHICS: FAST plots of extraordinarily complex objects. WARNING: AFTER YOUR KIDS TRY OUR RABBIT GRAPHICS YOU MAY HAVE A HARD TIME GETTING THEM TO GO BACK TO THE TURTLE GRAPHICS OF LOGO. Not that ours will teach them LOGO, its just that ours are faster, easier, prettier, and many are multidimensional.
    INSIDE-OUT SIN/COS PLOTS: Type a single number and plot triangles, planets, pottery, "saturn", 3D inside-out creations, 100+ variations.
    IMPOSSIBLE FIGURES: Multidimensional hplot variations.
    SEMI-SOLID "3D" FIGURE: Variations in light and texture give the illusion of depth to a figure.

VI ARTISTS PAD: Converts the paddle control into a hi-res graphics pad. Includes multiple brush sizes, four special effects "brushes" some with limited "3D" ability (try to get that out of a graphics tablet!), erase capability, and more. Use ArtMotion shapes to create background and switch to brushes to finish. Fire buttons will plot lines for fast draw.

VII ARTISTS KEYBOARD: Converts the ADAM keyboard to an artists sketchpad. Full cursor control of drawing, ASZX keys give diagonal control. SmartKeys select ornate designs to produce special effects. Press a button to convert line draw to dash for schematic drawings. Cursor controlled eraser. Automatic repeat draw.

𝔊𝔯𝔞𝔭𝔥 · 𝔖𝔱𝔞𝔱'𝔰

THE BUSINESS GRAPHS PACKAGE

Whether its for your teacher or your business you may find a use for these graphs. Now you can plot your data points in six styles, including "3D", ladder, segmented, solid, or line graphs and save your data to tape. You can display at a glance the performance of IBM stock over the year or plot the month to month variation of your own fortunes. Knowing seasonal variations in sales in your own business may help you decide what to stock and when. Or it may be useful for printing out in a report to show the boss graphically just how your new idea has succeeded (Oops, it may also show how your idea has failed. In that case press the CLEAR data button).

* Choice of styles: Press a SmartKey for automatic change to one of six styles plus a print dump graph.
* Automatic scaling of % values.
* Press a SmartKey to select the number of variables to plot.
* SAVE and RECOVER your data to its own DataFiler from within the program.
* PRESS ADAM'S PRINT KEY AND AUTOMATICALLY CONVERT YOUR DATA TO A FORM THAT PRINTS OUT ON YOUR ADAM PRINTER! Add graphs directly to your school or business report.
* Multicolor HI-RES screens. Even plays a tune for you.
→ * NEW! STATISTICS PACKAGE: AUTOMATICALLY COMPUTES AVERAGE, PERCENTS, STANDARD DEVIATION, PROJECTED VALUE, PROJECTED AVERAGE, AND MORE. PRINT DUMP TO ADAM's PRINTER! All from within the program.

Now we can't say that the $29 Graph Package has all the features of a $300 Visiplot^{tm} program, its pretentions are more modest. But these graphs are prettier, and easier to plot. The PRINT dump to ADAM's printer alone makes it valuable, and the STAT PACK is an added value.

𝔰𝔱𝔞𝔱 𝔭𝔞𝔠𝔨!

ARTIST'S PAD

This is a short version of software from THE GRAPHICS EXPERIMENTER for those who prefer to start with a less expensive, but quite functional art maker. It contains three basic features:

I ARTISTS PAD Converts your game paddle into a HI-RES drawing pad with special effects brushes (even limited "3D" effects) - try getting this out of a graphics tablet! Also with firebutton line plot, erase, & more.

II KEYBOARD ART Far more accurate than the paddle control, the keys allow cursor and diagonal control of special ornate designs, erase, color change, and more.

III ARTMOTION COMPUTER GENERATED ART: New art from every key. Multicolor graphic designs draw for several minutes. Geometric shapes, characatures, patterns. Stop the draw at any point and switch to the paddle control to add your own touch. TOTALLY UNIQUE!

NIK

THE GRAPHICS EXPERIMENTER

WHAM! POW! ZOWIE! So you bought a computer expecting to do some of those nifty computer generated graphics you have seen. And now you find you can't even hplot a circle? Heads up! THE GRAPHICS EXPERIMENTER will have you doing your own spectacular polar art, "3D" sweepart, sine/cosine--spherical/cartesian and multidimensional art about as fast as you can type RUN.

You can watch the sweepart actually draw around, behind and through itself. In the multicolored versions, flowers will change color in the center and along the edges as the new color draws itself in and around the first color. Be patient with the sine/cosine art as it takes one to two minutes to draw and some will take several more minutes to run the color spectrum. Watching it draw itself is half the fun. The best part comes when you switch from the examples to the experimental program. It is simple enough to be used by ten year olds through adult ages.

We apologize for being immodest, but if you have ever spent $19.95 for a book on computer graphics, typed in hundreds of lines and been up till the wee hours fumigating your program, only to find that the lines it drew could have been drawn by any munchkin with a crayon, then we think you will appreciate this package.

EXPERIMENT WITH "3D" AND ARTMOTION GRAPHICS

'3D'

Wow your friends! Make your boss think you know a lot more than you really do. Or just blow the socks off your dad who, by now, probably wishes he had spent the money on a Honda instead of a Hacker.

The experimental control allows you to input your own variables, do graphic distortions, create new art, and gives you control over what you see. Run the ArtMotion shapes and you will see why ADAM ate the Apple.

THE GRAPHICS EXPERIMENTER is designed to let you make variations in our formulas so you can create your own original art. An enormous range of variations are possible. If you are bored with simple hplots then we think you will find this package a pleasant change. Most artists packages give you only simple plots of length and height. We give you MOTION and DIMENSION in our package.

THE GRAPHICS EXPERIMENTER is an integrated program, SmartKey referenced, menu driven, with key prompts and an instruction manual."

NEW! Now you can use our computer generated background art, switch to the Keyboard Artist, and call up Rabbit Graphics all from the same screen!
